

About the SPST version 1.1.8 update

Last Modified: October 9th, 2020

What's included in 1.1.8 (changes since 1.1.7)?

New features:

- Remember last directory visited with firmware binary picker
- Added locate button
- Contains latest fw 2.62 build

Fixes and improvements:

- Fixed WebAPI issue when only HTTPS enabled
- Fixed scaling issues, changed minimum size of main window
- Miscellaneous minor improvements and fixes
- Resolved crashing when only gateway selected for FW update
- Fixed issue with rebooting open ring
- Disable fw update button when only classic PDU and gateways selected
- Fixed FW update of single PDU in ring
- Fixed IPAPI groupwrite function typo
- General performance and stability improvements
